

## ABSTRACT OF THE DISCLOSURE

An organic photoconductor including a charge generating layer and a charge transport layer on a conductive base, wherein crossing angle $\theta$  of two tangent lines is  $70^\circ$  or more, two tangent lines which border on a curve drawn by plotting integrated values of detected current versus time in measurement of transient photocurrent (TOF), at a field intensity of  $10\text{V}/\mu\text{m}$ ; and film thickness of the charge transport layer is 8 to  $15\mu\text{m}$ .
